

# 3v3 Field Marking

3v3 field diagram

3v3 field layout within full-size field  
(measurements are space to edge of full-size field)

## Marking Procedure:

The full-sized field is already marked. These instructions are for marking four smaller 3v3 fields in one half of the full-sized field.

1. Stake point A 15' from the full-size sideline and 11' from the full-size goal-line.
2. Stake point B 90' from point A and 11' from the goal line of the full-sized field to form the 3v3 side line.
2. Stake point D 60' from point A and 15' from the full-sized side line to form the 3v3 goal line.
3. Verify location of D by measuring 108'2" diagonal across entire field -- adjust location of D until A-D and B-D measurements are satisfied.  
**Do not proceed until these measurements are accurate.**
4. Mark center of field (E) at the halfway point (54'1") of the diagonal.
5. Mark fourth corner (C) by measuring the opposite diagonal from B through E to C at 108'2"
6. Verify location of corner C by confirming that C-D measures 90' and B-C measures 60'
7. Mark the midfield line by measuring 45' from each corner (points F & G).
8. Once all measurements are confirmed, hand-spray all angles.
9. Starting at the side of the center line (point F), run string around field one time (F,B,C,G,D,A,F), looping around each corner stake, and then across the field for the centerline (F-G).
10. Use spray machine to outline field using the string as a guide.
11. Spray the center circle by tying a string to the center stake (E). Measure 9' from the center and manually spray the circle by holding the spray can at this string location while walking around the center stake.
12. Hand-spray 2' circles in corners for corner kicks.

### NOTES:

- \* If measurements are exact, then you are a pro and will be put in charge next year :-). If things work out within about 3-6 inches, you are doing pretty good.
- \* Once one field is laid out, use the goal lines and touchlines of the first field to help in locating the positions of corners and lines of adjacent fields.
- \* Leave about 15' between all fields and at least 10' to the full-size field midfield line and goal lines (actual distance will vary with the size of the larger field).
- \* After one field is marked (steps 1-8), have the marking team move to the next field while another team runs the lines and sprays the field (steps 9-12).
