Measuring Base Paths:

The starting point is the white tip at the back of home plate (the part pointing to the catcher and backstop).
 Measure from the tip to the back corner of first base (the corner closest to the foul line and furthest from second base and home).
 The next measurement goes from the back corner of first base to the center of second base.
 Now measure from this point to the back corner of third base, and then back to the original starting point at home plate.
